Learn how to deliver Middleware components faster at lower costs

Are you looking for a way to effectively control your Agile Middleware development and deploy process?

By leveraging Life Cycle Management you can easily manage an application's life cycle from development to production, integrate Versioning and Issue Tracking tools, automate the Build and Deploy process, set up approvals and notifications, and even adopt DevOps. (This seminar is targeted towards Management, Operations, Change Managers and QA Managers)

Seminar agenda

Introduction / Welcome

(BE: Marc Gueury - Oracle / NL: Mike Kruijsdijk - Darwin IT)

Essentials of Life Cycle Management and DevOps

(René De Vleschauwer - RedBridge Software)
